Re: Consolidation Coal, Emery Mine Culinary Waterline Project

Dear Mr. Braxton:

This letter is to provide information requested regarding Consol's culinary waterline project.

Consolidation Coal Co. is planning on installing an 8" culinary water line from Emery Town to Consol's Emery Mine. This being a distance of approximately four (4) miles.

The purpose of the line is to provide culinary water to the offices and bathhouses at the mine. The water will not be used in mining but just for culinary purposes. There will also be approximately twenty four (24) individual metered connections along the line to provide culinary water to the property owners. Once the water connection requirements are met Emery Town will furnish the treated water, read the meters and do the billing.

Because of an agreement with Emery County and Emery Town we have obtained the necessary right-of-ways to install the majority of the line on private property. The line will be parallel to the county road right-of-way located on the west side of the road on adjacent land owners. At one point we will cross the county road and travel parallel to the road on the east side. Near the end of the line we will go into the road right-of-way and then into mine property.

The line is engineered and designed by Johansen and Tuttle Engineering. Nielson Construction will install the line. The construction is planned to begin approximately August 15, 2001. All design specifications will be met and installation will be inspected and approved by Johansen and Tuttle. The line will be buried a minimum of five (5') feet.

No reclamation of the line is planned because of the public consumption along the line.
